Please disregard the previous office action, dated 10/24/04 as it was sent in error. The office action of 10/24/04 is hereby VACATED

A request for continued examination (RCE) under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. This application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 91-94, drawn to a chimeric NPY5 receptor in which the third intracellular loop domain is substituted by the loop domain of an NPY1 receptor; classified in class 530, subclass 350+.
- II. Claims 95-98, drawn to a chimeric NPY5 receptor in which the C-terminal domain is substituted by the C-terminal domain of an NPY1 receptor; classified in class 530, subclass 350+.

The inventions are distinct, each from the other because of the following reasons:

Although there are no provisions under the section for "Relationship of Inventions" in M.P.E.P. § 806.05 for Inventive Groups that are directed to different products, restriction is deemed to be proper because these products constitute patentably distinct inventions for the following reasons: Groups I and II are independent and distinct, each from the other, because the products possess characteristic differences in structure and function and each has an independent utility that is distinct for each invention which cannot be exchanged.

Art Unit: 1647

Furthermore, searching the inventions of groups I and II together would impose a serious search burden. In the instant case, the searches of the two chimeric polypeptides are not coextensive. In cases such as this one where sequence information is provided, each sequence is searched in appropriate databases. There is search burden also in the searches of non-patent literature. There may be literature papers which have knowledge of one polypeptide, but not the other. Searching, therefore, is not coextensive. This search requires an extensive analysis of the art retrieved in a sequence search and will require an in-depth analysis of technical literature. As such, it would be burdensome to search the inventions of groups I and II together.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention(s) to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 C.F.R. 1.48(b) and by the fee required under 37 C.F.R. 1.17(i).
